

ECRS Money Counter

Take control of your cash and eliminate errors with a Tellermate Money Counter. If you perform numerous daily shift changes and cash lifts, a money counter is the ideal solution to maintain control over your cash movement. Enable quick count cash lifts and spot checks while keeping a running total of the day's activity. Count coins and bills, as well as non-cash items such as checks, credit cards, gift cards and coupons, all while creating a more efficient, less costly counting process.

Benefits of Tellermate Money Counters

Saving time is one of the many benefits of Tellermate systems. Even small retail outlets can spend over 200 hours per year processing cash. Larger stores spend thousands of hours per year on tasks such as counting tills, checking safes, preparing deposits, and completing reports. Tellermate Money Counters can typically save up to 80% of this time. This is time that can be used to serve customers or complete other, more important management tasks.

Traditional machines simulate hand counting. They count notes and coins one at a time and you need two machines, one for notes and one for coins. Because they rely on moving the money between sensors, they are big, noisy, generate dust, and require frequent, costly maintenance. Tellermate Money Counters count electronically in parallel, in batches of up to 25 notes or 100 coins at a time. There are no moving parts and therefore no noise, dust or frequent maintenance. Tellermate also has products that enable rapid screening of strapped bundles of notes and rolls or bags of coins, without removing the wrappers.

Cash is a security risk, cash is vulnerable. Money counters make a major contribution to 'cash confidence'. Cash management also has many incidental costs: the cost of counting, the cost of time lost, the cost of errors, the cost of theft or fraud, the cost of additional labor and staffing, the cost of poor customer service. Tellermate removes the hidden costs from your cash and maximizes your profits.

Efficient cash management is more than a back-office art, it directly affects customer perceptions of your business and your service. Tellermate systems improve service and satisfaction by ensuring accuracy and efficiency, and by giving you more face-to-face time with your customers. Tellermate money counters give you time to reinvest in other activities.

Generally, Tellermate users recoup their costs in less than twelve months, and sometimes in as little as twelve weeks. If you have a large or complex business, ECRS will work with you to analyze your cash operations, and specify an optimum solution including a well researched estimate of the financial and other benefits.

University of South Carolina (Campus Division) ROI Study

In February 2004, the University of South Carolina Campus Division deployed 4 Tellermates and 4 Printers, using the Tellermate till cup inserts. Benefits realized have been:

Cash Office

- Saving 20 hours a week in the cash office alone (\$17/hr overtime avg)
- 20 hours @ \$17 X 39 weeks = \$13,260 savings per year

POS

- Saving 15 minutes per drawer (22) 3 shifts per day = 990 minutes or 16.5 hours per day
- 16.5 hours X 7 days per week = 115.5 Hours a week in savings
- 115.5 hours @ \$7 X 39 weeks = \$31,532 savings per year

Return on Investment

- Combined Cash Office and POS annual savings of \$44,792 per year
- Total cost of the Tellermate systems for this installation: \$5,780
- Return on Investment of 6.7 weeks
